# Enhanced rater nomination experience in SHL 360

We are introducing an upgraded rater nomination experience in our SHL 360, designed to be more intuitive, and efficient for participants.

This upgrade addresses past usability challenges by delivering a cleaner interface, simplified navigation, and faster, smarter search.

With predictive search, potential feedback providers are dynamically suggested as you type, making the nomination process faster and more efficient. In addition to name and email, you can search using a range of available employee data fields (e.g., location, user ID), depending on your configuration.

Search results include detailed information to help you confidently identify the right individuals - even in cases of similar or duplicate names.
