Enhanced Multilingual Support and Workflow Improvements in TalentCentral+

We're excited to announce the latest updates to TalentCentral+ that includes the introduction of new interface languages including Canadian French and Japanese. Alongside these language additions, we've implemented several workflow improvements for you to manage the customisable, localised content of the participant experience; these improvements include the following:

- Browser language detection
- Report delivery and download in the recruiter's preferred language
- Preview participant on screen messages in the recruiter's preferred language
- Create custom email templates in multiple languages

Browser language detection

TalentCentral+ now automatically detects the user's browser language upon login. If your browser language matches one of our supported languages, the platform will be automatically localized to that language. For example, if the your browser language is Canadian French, then the platform will be shown localised in Canadian French.

You can easily switch back to another supported language through the platform's language settings if desired, offering flexibility and convenience.

Report delivery and download in the recruiter's preferred language

TalentCentral+ now ensures consistency by displaying and allowing the download of reports in your selected interface language. If the report is available in your chosen interface language, it will be presented in that language by default, the fallback language is the one selected at the time of project creation.

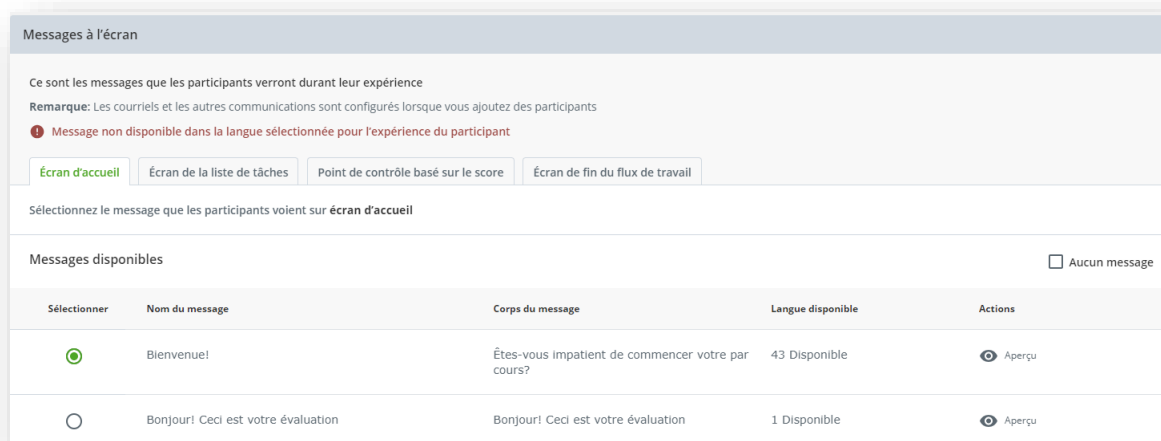

The screenshot shows a dialog box titled "Changer la langue" (Change Language) with a green header. Below the header, the text reads "Sélectionnez la langue de l'interface de TalentCentral+" (Select the interface language of TalentCentral+). There are four language options listed, each with a radio button: "Français Canadien (French Canada)" (checked), "English (International)", "English (US)", and "Français Canadien (French Canada)". Below these, there are two more options: "中文 (Chinese)" and "日本語 (Japanese)". At the bottom right, there are two buttons: "Annuler" (Cancel) and "Enregistrer" (Save).

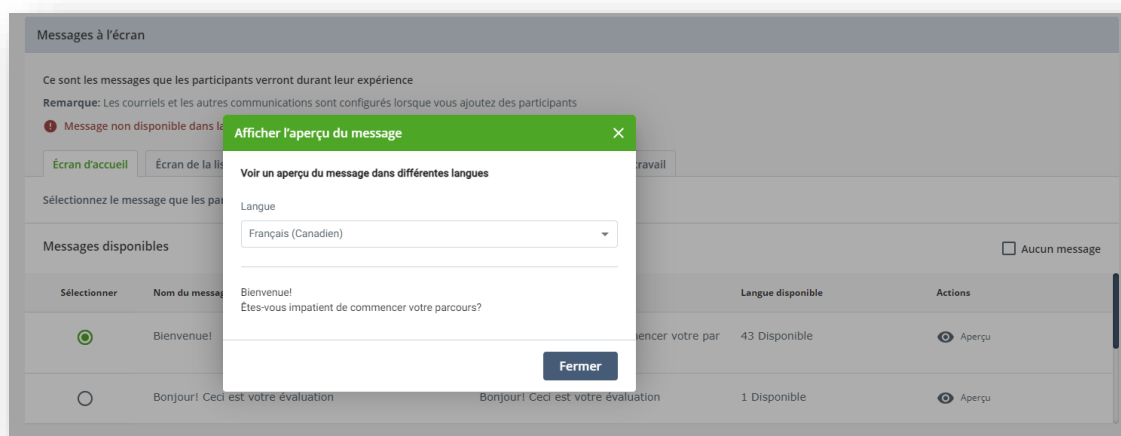

Preview participant on screen messages in the recruiter's preferred language

TalentCentral+ now displays participant on-screen messages to you in your chosen interface language, ensuring comprehension and accuracy. By viewing messages in your preferred language, you can better understand and select the most appropriate messages for participants. The preview feature still persists, allowing you to preview the message in multiple languages.

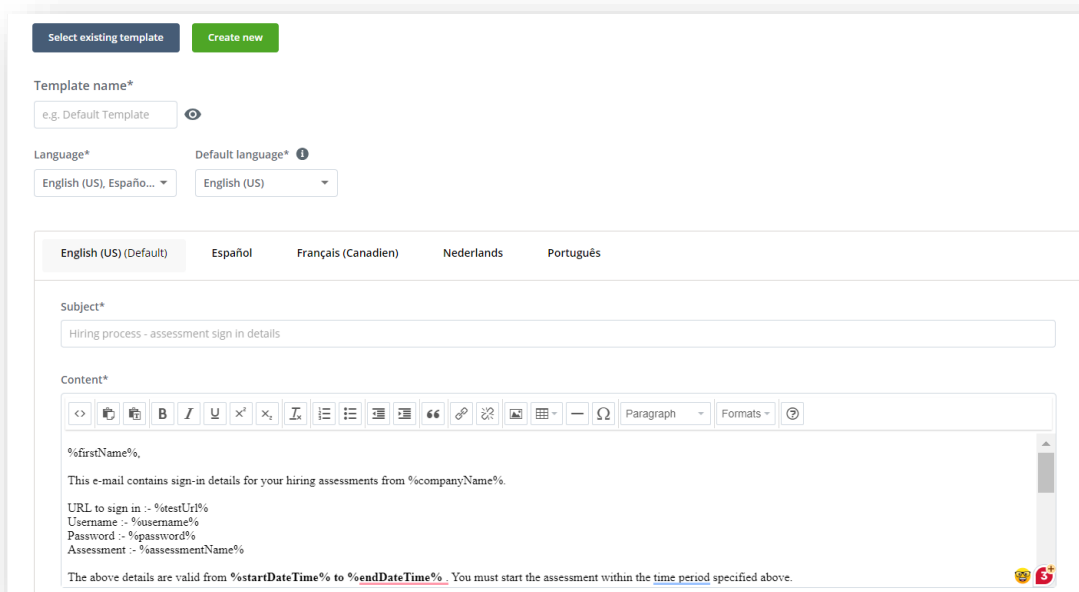

The preview function will remain as is.

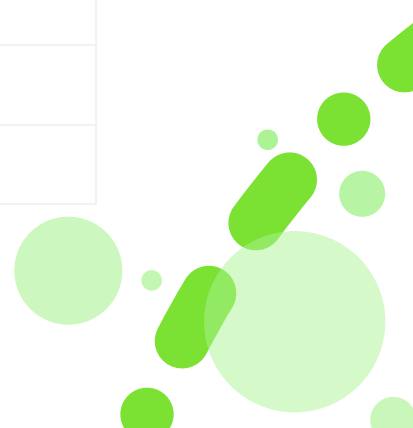

Create custom email templates in multiple languages

TalentCentral+ now allows you to create custom email templates in multiple languages and select a default (fallback) language. The created custom email templates can be scheduled from the scheduling screen while creating a project.
